# Brown Paddle Finisher Model 202

## HOW IT WORKS:

Using a straightforward yet robust design, the **Model 202 Series 207 Paddle Finisher** efficiently separates product into solid and liquid component streams at optimum yield.

- Product enters a wide-throat chute and is conveyed into the screen cage assembly by an impeller
- A high-speed contoured paddle assembly conveys the product along the cage while spinning it against perforated screens
- Pulp, puree, and liquid passes through the screens and falls into the drain pan below to be pumped from the finisher
- Solids are retained by the screens and pushed by the paddles to an exit chute for easy collection
